| <b>Article Summary (50-75 words)</b>                            | This article dives into the idea of how your building design can affect your profit/income as a business owner. It mainly examines key points, like Maintenance costs being predictable if you plan for them. It also highlights how flexibility has a dollar value, and that a building that locks you to one configuration is actually a liability just disguised as an asset. |
| <b>Example In-Text Citation</b>                                 | <b>(Duron, 2026)</b> “Markets shift, and businesses evolve. A building that locks you into one configuration is a liability disguised as an asset. This is part of why steel buildings are shaping the future of retail spaces and other commercial environments.”                                                                                                               |
| <b>Optional Notes on SLR</b>                                    |                                                                                                                                                                                                                                                                                                                                                                                  |

|                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
